Art Unit: 2622

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 45-53 are rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Sasaki</u> (U.S. 5,228,118) in view of <u>Gase et al</u> (U.S. 5,580,177).

As to claim 45, <u>Sasaki</u> discloses an information processing apparatus comprising: an inquiry circuit (see figures 1-2: inquiring means) adapted for making an inquiry about a printer language supported by the printer (see figures 1 and 2) connected to the network; and a receiver (see column 2, line 60 to column 3, line 13) adapted for receiving information about the printer language supported by the printer, wherein the information is sent in response to the inquiry (see column 2, line 60 through column 3, line 13). <u>Sasaki</u> discloses changing of the printer from one type to enother (see column 2, lines 3-4 and 49-50).

Sasaki does not teach a determination circuit adapted for determining a presence or an absence of a printer connected to a

Art Unit: 2622

network. <u>Sasaki</u> does not specify making an inquiry about a printer language supported by the printer connected to the network if the determination circuit determines the presence of the printer connected to the network.

Gase et al teaches a printing network having a plurality of clients (10, 12 and 14) connected to a server (16), and the server (16) is further connected to a plurality of printers (18, 20 and 22) (see figure 1). Gase et al teaches a determination circuit adapted for determining a presence or an absence of a printer connected to a network (see column 1, lines 43-48); and making an inquiry about a printer language supported by the new added printer connected to the network if the determination circuit determines the presence of the new added printer connected to the network (i.e., if a new printer is added or connected to the network, a new printer driver must be installed on the client host computer, so that the client will be able to use or print on the newly added printer) (see column 1, lines 43-48).

Therefore, it would have been obvious to one person having ordinary skill in the art at the time the invention was made to have modified <u>Sasaki</u> wherein: the information processing apparatus includes a determination circuit adapted for

Art Unit: 2622

determining a presence or an absence of a printer connected to a network, and wherein the inquiry circuit is adapted for making an inquiry about a printer language supported by the printer connected to the network if the determination circuit determines the presence of the printer is connected to the network.

It would have been obvious to one person having ordinary skill in the art at the time the invention was made to have modified Sasaki by the teaching of Gase et al because of the following reason(s): (1) for the reasons taught by Gase et al (see column 1, lines 43-48); and (2) to determine when a newly added printer is added or connected to the network, so that the network or the clients or the users, will be aware of the newly added or connected printer, and to inquire as to what kind of printer languages are supported by the newly added printer, therefore, the users or clients will be able to use or employ the newly added or connected printer.

As to claim 46, <u>Sasaki</u> as modified discloses wherein the determination circuit determines the presence or the absence of the printer connected to the network by inquiring about management information base information to the network (see Gase et al, see column 1, lines 43-48).

Art Unit: 2622

As to claim 47, <u>Sasaki</u> as modified discloses a display circuit (41 and 42) adapted for displaying on a display a message (see fig. 6, S15 and S18 and see fig. 8, S34) indicating that the printer language supported by the printer is unidentifiable if the receiver does not receive information about the printer language supported by the printer (see column 8, lines 24-43 and column 10, lines 47-54).

As to claims 48-50, <u>Sasaki</u> discloses an information processing rethod. The steps of method claims 48-50 claim subject matter corresponding to and similar to the claimed limitations that are found in the information processing apparatus claims of claims 45-47. Therefore, claims 48-50 are similarly rejected.

As to claims 51-53, <u>Sasaki</u> discloses a computer-readable storage medium for storing a program for implementing an information processing method. The program codes of the computer-readable storage medium of claims 51-53 claim subject matter corresponding to and similar to the claimed limitations that are found in the information processing apparatus claims of claims 45-47. Therefore, claims 51-53 are similarly rejected.

Art Unit: 2622

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dov Popovici whose telephone number is (703) 305-3830.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, DC 20231

or faxed to:

(703) 308-9051 (for formal communications intended for entry)

(703) 308-5397 (for informal or draft communications, such as proposed amendments to be discussed at an interview; please label such communications "PROPOSED" or "DRAFT")

or hand-carried to:

Crystal Park Two 2121 Crystal Drive Arlington. VA. Sixth Floor (Receptionist)
